

REAL-TIME STUDENT TRACKING

The Most Efficient, Affordable, and Reliable System for Tracking Students in Class and En Route.

uAttend™ Student is a complete student attendance system that allows schools and school districts to accurately and efficiently track students during their daily school cycle. The system was developed to deliver a cost-effective solution for schools needing accurate and verifiable attendance records for internal and external audits.

A DAY AT BIG PINE SCHOOL DISTRICT

Key uAttend Student Features Include:

- **Bus Tracking** — We combine Internet access, biometric punches, and cellular connectivity to track students from the moment they board a school bus until the time they disembark. The system can be enabled to use GPS tracking, giving an accurate reading of the exact location where each student boards and exits a bus.
- **Classroom Attendance** — The uAttend Student system allows seamless attendance reporting from classroom to the front office. Students check themselves into class using the biometric fingerprint device, then teachers visually confirm attendance, make adjustments and add notes if necessary, and submit the data to the front office for administrative review. Rules that define tardiness, class start and end times, and many other features can be set up to make management a breeze.
- **Event Tracking** — From field trips to after-school clubs, uAttend Student gives administrators and parents real-time information about where students are during any school activity. Events can be defined as one-time (such as a field trip) or recurring (such as school club meetings), allowing for easy setup and management.
- **Reporting** — At the heart of the uAttend Student application is a robust reporting engine that allows administrators to have access to the data they need in the format that works for their system. Reports can be set to recur on intervals or be run ad hoc in the system. All data can be displayed in graph form, exported as a .csv file, or saved as a .pdf document

How uAttend Student Works

uAttend Student uses biometric fingerprint scanning timeclocks that connect to the Internet to record students' movements throughout the school day. The BN3000S timeclock can be mounted in school buses and connected to the Internet via a modem on a cellular network. Timeclocks in classrooms can connect to the Internet via a LAN cable connected to a switch or a router.

Students are able to "punch" themselves into and off buses, in and out of classrooms, and onto event rosters. All punches are sent in real time to the web-hosted software that can be accessed by authorized administrators from any computer with Internet access.

Administrators can then run reports, check class and bus attendance in real time, and manage settings in just a few steps. The uAttend Student solution is the most simple and efficient student attendance tracking system you can find.

The Right Price for Any Size School

ProcessingPoint is a leader in providing innovative solutions to thousands of small businesses nationwide. From cutting-edge, cloud-based time and attendance tracking, to the latest in mobile payments technology, ProcessingPoint drives innovation in new technology to bring products and services that save clients time and money while performing mission-critical business tasks.

The uAttend Student system is within any school's budget with the BN3000S biometric timeclock under \$300.00 and monthly fees starting at \$19.00 per clock. The system includes a one-year warranty on equipment, data storage of all records for two years, unlimited customer support, and free software upgrades.
